CSC 251 LECTURE 10 ACTIVITY

Name_____

1. Given the following variable assignments, what is the output of the print statement?

```
a = 2
b = 12
z = 3
print(10 % z - a ** z + b // 5)
```

```
-5
```

2. Show the output of each statement with appropriate formatting, given the following sequences:

```
x = (12, 23, 34, 45, 56, 67)
y = ['yesterday', 'today', 'tomorrow']
z = 'yesterday, today, tomorrow'
```

a) `print(x[2:5:2])`

```
(34, 56)
```

b) `print(y[2][4])`

```
r
```

c)

```
if 'or' not in z:
   print('never')
else:
   print('always')
```

```
always
```

3. a. Write a map function that takes each element of a list named `list1`, adds 3 to the element then squares the result using a lambda function. Name it `plus_3_squared`.

```
plus_3_squared = map(lambda x: (x+3)**2, list1)
```

4. Write a list comprehension to create the following list of cubes: [1, 8, 27, 64, 125, …1000].

```
cubes = [i**3 for i in range(1,11)]
```
