CSC251 Python Arithmetic NAME:

Suppose the variables below are assigned values in your program:

```
x = 4
y = 12
z = 10.0
mascot = "Wolfpack"
```

What values would the following expressions yield? Use original variable values in each expression. Indicate if an expression is not valid and results in an error. Check your answers using the interactive Python mode.

1) `y + x * z`

2) `x % y - x`

3) `x / y + z`

4) `x // y + z`

5) `x**2//y`

6) `int(z) * y`

7) `float(y)- x`

8) `y % 0 * x`

9) `2**4**2`

10) `float(y//5)`

11) `-y // 7`

12) `"Go" + mascot + ", Go!"`

13) `mascot + 10`

14) `"3" + "2"`

15) `z^3 +3 * z`

16) `y + x % 3 // x - y`
